

Funding support for your NHS England Improvement Grant scheme

We can lead and manage your Improvement Grant scheme from the due diligence phase, and if approved by NHS England and the ICB, to the onsite delivery, monitoring and commissioning.

Having early support at the application and due diligence phase can help unlock funding to make improvements to your building. For example:

- address statutory compliance requirements
- create additional capacity for clinical and non-clinical services.

Experienced end-to-end support for your NHS England Improvement Grant

Due Diligence

Design & Procurement

Project Management & Technical Oversight

Commissioning

Managing a successful Improvement Grant can be challenging and time-consuming. Our experienced team has a strong track record in managing successful Improvement Grant schemes.

We can help you navigate the Expressions of Interest application, the due diligence response, design, procurement of the building contractor, onsite delivery/monitoring and commissioning.

Our comprehensive two phase approach includes:

Phase one:

- Leading and completing the Expressions of Interest application and developing a comprehensive due diligence response.
- At this phase, the practice can apply for 12% of the total construction budget for professional fees as a 100% grant. This means if your Improvement Grant is approved by NHS England and the ICB, the services outlined opposite will be entirely covered within your Improvement Grant application.

If the Improvement Grant project is approved by NHS England and the ICB, the project and the support can progress to the next phase.

Phase two:

- Liaising with key stakeholders from NHS England, local ICB teams to the District Valuer, Town Planning departments, Landlords and construction professionals.
- Leveraging our relationships in the industry to build the team required to deliver a value for money solution.
- Developing all of the necessary technical documentation, including detailed design layouts, Room Data Sheets, Tenants Requirements document and Schedules of Accommodation.
- Providing onsite project management and technical oversight through to delivery and commissioning.
